

Kliptos Founder Pack

(2026-08-01 — MVP summary, brand prompts, IP & pitching guide, manual task list)

1. THE MVP — what Kliptos is today (copy-paste for pitches)

One-liner: Kliptos turns live trends into published short-form videos — automatically, in any of five formats, in your language, on your schedule.

The working product (all live, all tested):

- 🔥 **Trend radar** — Google Trends + YouTube charts, clustered into 8 niches, refreshed on demand
- 📝 **Script engine** — 4 styles (story / news / educational / commentary), 4 languages incl. Hindi, custom instructions, bring-your-own-script (wording preserved), model choice (Gemini/GPT), BYO API keys
- 🎬 **Five output types** — narrated short · visual/music short · image carousel · script-only (free) · premium AI video (engine ready, awaits billing)
- 🗣️ **14 neural voices** with live previews (US/UK/AU/Indian English, Hindi, Spanish, Portuguese)
- 💬 **5 caption styles** incl. word-synced karaoke highlighting
- 🚀 **Series autopilot** — recurring creation from live trends or a fixed theme, daily/2-day/weekly, auto-publish or review-first, credit-safe
- 📺 **YouTube publish & schedule** with editable metadata; Instagram Reels code complete (Meta review pending)
- 💳 **Credit economy** with full ledger, auto-refunds on failure, variable pricing designed to stay profitable on premium engines

Traction stats to quote: built from empty repo to this in <1 week; 78 automated tests; first real YouTube publish completed; unit economics modeled against Veo API pricing.

The moat (memorize these 4): trend-driven creation (not blank-prompt) · multi-format (not story-only) · BYO keys (margin protection) · India-first (Hindi + ₹499/UPI). Endgame: creator monetization marketplace.

2. LOGO PROMPT — Veo 3 / Imagen / Gemini image

Static logo (use in Gemini app / Imagen / any image model):

Minimalist modern logo for "Kliptos", a video-AI startup. A bold geometric letter K constructed from a 9:16 vertical video frame outline merging into a play button triangle, subtle upward motion streaks suggesting trends rising. Gradient from electric violet (#7C3AED) to bright blue (#3B82F6) on a near-black background (#09090B). Flat vector style, sharp edges with one rounded corner, no text besides the mark, no gradients in the background, high contrast, scalable app-icon quality, centered composition.

Variations to try: replace the K construction with — "a K formed by two overlapping vertical phone screens" · "a K whose diagonal stroke is a rising trend-line arrow" · "a lightning-fast clapperboard forming a K".

Animated logo reveal (Veo 3, 8s clip for video intros):

An elegant 8-second logo animation on a near-black background: dozens of thin violet and blue light streaks (like rising trend graphs) flow upward and converge in the center, snapping together to form a bold geometric letter K made from a vertical video-frame outline and a play-button triangle. The K pulses once with a soft violet glow, then the word "Kliptos" fades in beneath it in a clean bold sans-serif, followed by the tagline "Trends in. Shorts out." in smaller gray text. Subtle particle sparkles, smooth 60fps motion-graphics style, cinematic lighting, no camera shake.

3. 30-SECOND APP PROMO — Veo 3 scene prompts

(Veo 3 makes ~8s clips → generate these 4 scenes, stitch in order; add trending music at post.)

Scene 1 (0–8s) — the pain:

Fast-cut montage, moody desk lighting: a frustrated young content creator at 2 AM surrounded by sticky notes, scrolling endlessly for video ideas, timeline of a complex video editor on screen, head in hands. Text overlay in bold white: "4 hours per short?". Handheld camera feel, shallow depth of field, realistic.

Scene 2 (8–16s) — the reveal:

Clean UI screen recording style: a sleek dark dashboard with violet accents. A cursor clicks a glowing card labeled "Gaming trends", a trending topic card slides in, then an AI script writes itself line by line in a studio editor. Smooth screen-glow reflections, modern SaaS aesthetic, satisfying micro-animations. Text overlay: "Pick a trend. AI writes it."

Scene 3 (16–24s) — the magic:

A vertical 9:16 phone screen floating in dark space, a short-form video assembling itself in fast-forward: stock footage clips snapping into place, bold yellow karaoke captions lighting up word by word, an audio waveform pulsing, a progress bar completing with a green checkmark "Published to YouTube". Sparks of violet energy, product-render style, dramatic lighting. Text overlay: "Rendered. Captioned. Published."

Scene 4 (24–30s) — the payoff:

The same creator from scene 1 now relaxed with coffee in morning light, phone buzzing with view-count notifications rising (1.2K... 8.4K... 24K), a subtle smile. Camera pulls back through a window. Final card on near-black: the Kliptos K logo, "Kliptos — Trends in. Shorts out." and "Start free" button. Warm hopeful tones, cinematic.

4. PROTECTING "KLIPTOS" — patent vs trademark, honestly

Patent: skip it (for now). In India, software/business methods "per se" are not patentable (Patents Act Section 3(k)); in the US it's possible but costs \$10–25k and 2–4 years, and our edge is execution speed + data, not one patentable algorithm. No shorts-automation competitor holds a meaningful patent.

Trademark: DO THIS — it's the real protection for "Kliptos".

- **India:** file at ipindia.gov.in (Trade Marks Registry) — classes **9** (software), **41** (entertainment services), **42** (SaaS). ~₹4,500/class (startup/individual rate). Do a public search first (tmrsearch.ipindia.gov.in) for

conflicts. You can file yourself or via a CA/IP agent (~₹2–3k extra). Use the ™ symbol immediately; ® after registration (12–18 months).

- **US (when revenue justifies):** USPTO, ~\$250–350/class.
- **NOW, free, 10 minutes:** grab the handles — kliptos on X/Instagram/YouTube/LinkedIn + domain (kliptos.com / kliptos.app / kliptos.ai) before anything goes public.

Company: for Indian ops, a **Private Limited** (via MCA/SPICe+, ~₹7–15k with a CA) or an LLP; needed before Razorpay live keys and GST. If you later raise US venture money, a Delaware C-Corp (Stripe Atlas, \$500) with the Indian entity as subsidiary is the standard flip — don't do it pre-traction.

5. WHERE TO PITCH — investors & influencers

Investors (after friend-testing gives you numbers — remember the gate: ~30 paying, 60% margin, 40% M2 retention):

- **India early stage:** 100X.VC (₹1.25Cr for 15% iSAFE), Antler India, Titan Capital, Better Capital, First Cheque, PedalStart; angels via **LetsVenture** and **Angellist India**
- **Global: Y Combinator** (apply with traction video — the product demo IS the pitch), Pioneer, HF0
- **Creator-economy-specific:** Slow Ventures creator fund, Night Ventures, TVS (The Venture Studio) — they get this market fastest

Influencers / first users (do this BEFORE investors):

- **Product Hunt** launch (prepare: logo, 30s video, first 20 upvoters lined up)
- **X/Twitter build-in-public** — post the karaoke captions + autopilot demos as clips; this niche loves progress threads
- Reddit: r/NewTubers, r/PartneredYoutube, r/SideProject, r/IndianStartups (follow each sub's self-promo rules — share value, not ads)
- YouTube: search "faceless channel tutorial" creators (10k–200k subs) — offer free Studio-tier accounts for an honest review; 5 mid-size creators beat 1 celebrity
- Indian creator Discords/Telegram groups + WhatsApp creator communities — your ₹499/Hindi angle is the hook

6. THE MANUAL TASK LIST — things only YOU can do

This week (blocking product):

#	Task	Where	Time
1	youtube.upload verification request	Google Cloud Console → OAuth consent → Verification Center	30 min + weeks wait
2	Meta app + send me App ID/Secret	developers.facebook.com (guide: docs/INSTAGRAM_SETUP.md)	25 min
3	Stripe account → send TEST keys	stripe.com → Developers → API keys (test mode)	15 min
4	Razorpay account → TEST keys (India billing)	razorpay.com	15 min

#	Task	Where	Time
5	Render (or Railway) + Vercel accounts	render.com / vercel.com	15 min
6	Domain: buy kliptos.com/.app/.ai	Namecheap/GoDaddy/Cloudflare	10 min
7	Social handles @kliptos everywhere	X, IG, YT, LinkedIn	10 min

This month (brand & legal): | 8 | Generate logo (prompts above) & send me the final file | Gemini/Veo → me | 1 hr | | 9 | Trademark search + filing (classes 9/41/42) | ipindia.gov.in | 2 hrs | | 10 | Decide entity (Pvt Ltd vs LLP) + engage a CA | local CA | 1 wk | | 11 | 30s promo video (prompts above) | Veo 3 → stitch | 2 hrs | | 12 | Line up 10 friend-testers (Google test users) | consent screen → Test users | 30 min |

After deploy (I'll drive, you approve): Product Hunt draft, Search Console submission, comparison pages, influencer outreach list.
